

Shrini Corps

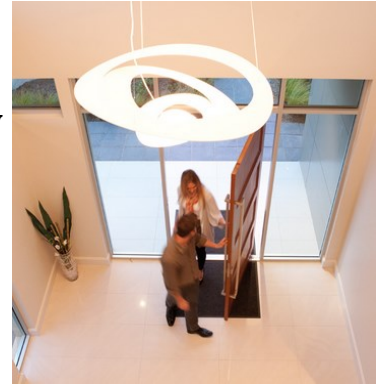

Intelligent Integrated Automation Systems

Indoor Multi Motion Sensors

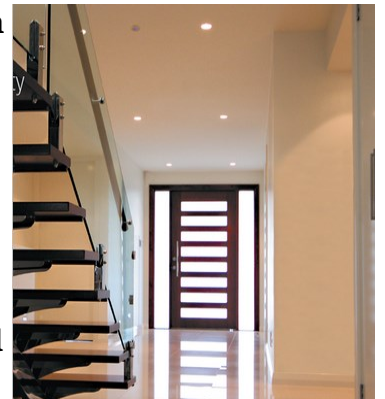

◆ Flexible and Functional:

Easily adjust the fall of light and sensing range so lights only turn on when they're supposed to.

◆ Energy Efficient:

You'll save energy - by between 30-50% - and reduce costs with lights switched on only when needed.

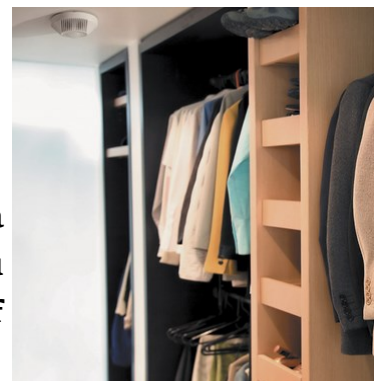

◆ Out of sight, Out of mind:

With adaptable designs to suit any surface ceiling mounted sensors sit discreetly out of view.

◆ Bright Idea:

Instant lighting when motion is detected, and off again after a pre-set time. Have your lights switch on automatically when you enter your walk-in robe. It will even switch the light off automatically when you leave.

Shrini Corps

Intelligent Integrated Automation Systems

Indoor Multi Motion Sensors Range:

Features & Benefits:

- ◆ 5-year warranty.
- ◆ Ceiling, surface and wall-mounted variants.
- ◆ Available in 90, 110 and 360 degree detection.
- ◆ Outdoor models are built for all weather conditions.
- ◆ Long range detection and immune to false triggering.
- ◆ Installed at a height of 2.5 m, multi-sensors detect movement in a circular range of 14 m.
- ◆ Based on passive Infrared Technology.
- ◆ The integrated light sensor is designed for daylight-dependent lighting control.
- ◆ Control Smart Automation Scenes and Sun-Blinds in addition to dimming and switching the lighting.
- ◆ The multi-sensors are particularly suitable for installation in single and open plan offices, foyers, stairways, conference and meeting rooms.
